

Ajax Wireless Alarm

Professional wireless security, controlled from your phone

Ajax is one of the most advanced wireless security systems available. Every device talks to the control panel over Jeweller, Ajax's encrypted two-way radio, so the system always knows that each sensor is present, working and has battery left. There are no cables to run, so it can be fitted quickly and neatly in homes, businesses and listed buildings, with no redecorating.

Why our customers choose Ajax

● Control from anywhere

Set, unset and check your alarm from the free Ajax app on your phone, wherever you are.

● Instant alerts

Alarms, tamper and power warnings are pushed to your phone within seconds.

● Photo verification

MotionCam detectors take photos when they trigger, so you can see what set the alarm off.

● Long radio range

Jeweller radio reaches up to 2,000 m in open space and spots jamming attempts.

● Years of battery life

Detectors run for years on their batteries and tell you well before they need changing.

● Grade 2 security

Certified to EN 50131 Grade 2, the standard expected for homes and most businesses.

● Keeps working in a power cut

The control panel has a built-in backup battery and mobile SIM backup.

● Pet-friendly

Pet-immune motion detectors help keep false alarms to a minimum.

The Ajax range

Every system is designed around your property. These are the devices we fit most often.

Hub 2 / Hub 2 Plus

The control panel. Connects over Ethernet, mobile SIM and (Hub 2 Plus) Wi-Fi, with a backup battery.

MotionCam

Pet-friendly motion detector with a built-in camera for photo verification of alarms.

MotionProtect

Pet-friendly motion detector that ignores animals and reacts only to people.

DoorProtect

Door and window contact that alarms the moment a door or window is opened.

DoorProtect Plus

Opening, shock and tilt detection in one, ideal for windows and patio doors.

KeyPad TouchScreen

Touch-screen keypad. Set and unset by code, key tag, card or your phone.

KeyPad

Touch keypad for setting and unsetting the system by code or key tag.

HomeSiren

Indoor siren (up to 105 dB) to disorientate an intruder and alert the household.

SpaceControl

Key fob to set and unset the alarm, with a panic button.

FireProtect

Wireless smoke and heat detector that can be added to the same system.

Installed, programmed and maintained by Wealden Security Systems

We design the system, fit it, set up the Ajax app on your phone and show you how to use it. All parts carry a 24-month warranty.
